Failure/choice — pick the right tool — Hints

> Back to the exercise · Hint 1 · Hint 2 · Solution

- Hint 1 — ask one question
- Hint 2 — the mapping

Hint 1 — ask one question

For each scenario, ask: **who is the user, and what do they need around the AI?**

- A person, and you need it *fast*? → the lightest UI.
- *Code* calling it? → an API.
- Users, logins, stored data, an admin? → the heavyweight that includes those.

The AI is the same every time — the answer is entirely about the app around it.

Hint 2 — the mapping

```
demo / "due tonight" / data app        -> Streamlit
JSON for another app or service        -> FastAPI
small custom web app you control       -> Flask
product with users + saved data + admin -> Django
a chatbot front for an agent           -> Streamlit (st.chat_input)
```

Write one sentence of *why* for each — the "why" is the actual exercise. If two feel close (Flask vs Streamlit for an internal tool), the tie-breaker is: do you need real routes and custom HTML (Flask), or is "a page with a box" enough (Streamlit)? The full reasoning is in the Solution.
