Edge cases (fix a flaky test) — Solution

> Back to the exercise · Hint 1 · Hint 2 · Solution

Story — `llm_output_testing_practice.py` (Edge cases section): everyone writes `assert response == "..."` against a real model at least once, and watches it fail on a perfectly good, correctly-worded answer. Fixing one such test on purpose — swapping the exact-match for a check of what actually makes the answer correct, like a keyword or a property, not its precise wording — teaches the habit every later LLM test needs. **If not:** the Build Task's rule-based tasks would be written as brittle exact matches, fail at random, and eventually just get ignored by everyone.

The solution calls the real OpenAI API, and runs from inside `practice/` with `pytest llm_output_testing_practice.py -v`.

Solution

Story: a property-based check is only ever as good as the property it tests for. Writing the reason in a comment right next to each `assert` forces you to actually articulate *why* that property proves correctness, and including the real reply text in the failure message means a failure is readable on its own. **If not:** a failing test would just say `AssertionError` with no context, and you'd have to rerun the model by hand just to see what it actually said.

```
# practice/llm_output_testing_practice.py — Edge cases section
from openai import OpenAI

client = OpenAI()

SHIPPING_PROMPT = (
    "You are a support assistant. Order A123 shipped today.\n"
    "Customer: Has my order shipped?"
)

def call_model(prompt: str) -> str:
    response = client.chat.completions.create(
        model="gpt-4o-mini",
        temperature=0,
        messages=[{"role": "user", "content": prompt}],
    )
    return response.choices[0].message.content
```

```
def test_shipping_reply():
    response = call_model(SHIPPING_PROMPT)
    # why: the key fact must be present, whatever the wording
    assert "shipped" in response.lower(), response
    # why: a direct reply, not a ramble
    assert len(response.split()) < 60, response
```

Expected output:

```
llm_output_testing_practice.py::test_shipping_reply PASSED
```
