Edge cases (a missing required argument) — Solution

Back to the exercise · Hint 1 · Hint 2 · Solution

Story — `missing_argument_practice.py`: when a required argument is missing from the user's message, the model can ask, guess, or send an empty value — and which one it does tells you whether your tool needs to design for a clarifying question or a graceful default. **If not:** the Build Task's Pydantic argument models would be guessing at a problem you'd never actually watched happen.

Solution

```
# missing_argument_practice.py
from langchain_core.tools import tool
from langchain_openai import ChatOpenAI

@tool
def get_weather(city: str) -> str:
    """Get the current weather for a named city. Requires a city name."""
    return f"Sunny in {city}"

# Sort one response into one of three real outcomes.
def classify_response(response):
    if not response.tool_calls:
        return "asked_or_answered_directly"
    city_sent = response.tool_calls[0]["args"].get("city")
    if not city_sent:
        return "called_with_empty_value"
    return "called_with_guessed_value"

# Ask the same vague prompt (no city!) 5 times and see what the model does.
model = ChatOpenAI(model="gpt-4o-mini", temperature=0).bind_tools([get_weather])
for run_number in range(1, 6):
    response = model.invoke("what's the weather like")
    outcome = classify_response(response)
```

```
    record = {"run": run_number, "outcome": outcome}
    if outcome == "called_with_guessed_value":
        record["city_sent"] = response.tool_calls[0]["args"].get("city")
    if outcome == "asked_or_answered_directly":
        record["reply"] = response.content
    print(record)
```

Expected output (example):

```
{'run': 1, 'outcome': 'asked_or_answered_directly', 'reply': 'Which city?'}
{'run': 2, 'outcome': 'called_with_guessed_value', 'city_sent': 'London'}
{'run': 3, 'outcome': 'asked_or_answered_directly', 'reply': 'Specify a city?'}
{'run': 4, 'outcome': 'called_with_guessed_value', 'city_sent': 'New York'}
{'run': 5, 'outcome': 'called_with_empty_value'}
```
